- Priority processing
- Inventory Management
- View the life cycle of the set

360 Dashboard
- Operating Room
- Decontam
- Prep & Pack
- Sterilization
- Storage
- Case Cart Staging

Managing your mission critical department

CaseTrak360 can improve patient safety, improve communication between The Sterile Processing Department and the OR, enhance efficiency, improve instrument inventory tracking and management, shorten training periods and learning curves, and streamline compliance with directives. Facilities using CaseTrak360 may also experience increased profitability through reduced instrument replacement costs and efficient use of manpower.

CaseTrak360 enables the hospital to answer the critically important questions of how, when and where the instrumentation is used and most importantly, whether the set is complete and properly processed for the surgical procedure.

RFID: Automated and Real Time

For mobile carts and equipment our RFID automated tracking system may be just what you need for identification and traceability, minimizing human error. SteriTite containers are now available with 1D and 2D barcoding, and soon to be released with autoclavable RFID tags.
