

CaseTrak360

Developed by Healthcare Professionals
for Healthcare Professionals

CaseTrak360 accommodates large healthcare systems and small community based facilities

CaseTrak360 provides...

- Rapid turnaround of cases for faster OR utilization
- Cost savings by minimizing surplus inventory and outages
- Faster location of equipment and devices
- More productive surgical hours per day
- Information for future purchase needs
- Improved patient outcomes, revenue and cost control

...and much, much more!

CaseTrak360

Developed by Healthcare Professionals
for Healthcare Professionals

CaseTrak360 delivers benefits others cannot

Competitor:

- Complex and time consuming Interface
- Designed for a singular purpose (i.e. repair tracking only)
- Instrument level tracking is time and resource intensive
- Extra charges for reports and features
- Created for the largest facilities at high acquisition costs
- Software only sold in conjunction with combined instrument purchase

CaseTrak360:

- User friendly and time saving
- Designed for SPD and OR resource management and infection prevention
- Set level tracking saves time and improves efficiency
- All inclusive price
- Scalable from large hospital systems to community based facilities
- Software available as a standalone purchase

Here's what a three-minute OR delay could
cost an average sized hospital each year...

\$1,095,000

OR delays happen every day at a cost that can range from \$62 to \$147 per minute. If an average sized hospital with 10 ORs experiences a three minute delay in each, at an average cost of \$100/minute that comes to \$3,000/day or almost \$1.1M per year.

CaseTrak360 reduces OR delays

Traditionally, instrument tracking systems have been rigid databases that provide a static record of individual items. These data driven systems are not linked to the way instruments are used and do not react well to changes. For example, if one instrument in a set is missing the software reacts by preventing the release of all instruments in the set until the missing item is located or a supervisor override is obtained.

CaseTrak360 tracks instruments and specialty devices as a complete set which is the way they are used. The dashboard is linked to the OR schedule and provides a cross-functional view across all departments. If for any reason an item is missing, the set can be released to the OR and the missing item can be replaced separately. This results in fewer delays and improved patient care.

Designed with The Patient in mind

Unique Report Features

- **Instrument sets linked directly to the patient**
 - Eliminates the risk of cross contamination
 - Provides infection control safeguards
- **Increased efficiencies with user friendly and intuitive software**
 - Avoid errors with prompts and instructions
 - Provides fast tracking for patients in need of emergency care
- **Positive Clinical Outcome Support**
 - Immediate access to reprocessing instructions and links to IFUs contribute to patient safety
 - Integration with OR schedule means less delays and better OR utilization.
- **Clinical Automation and Integration/Interoperability**
 - Drives process improvement and efficiency across the materials management/procurement department, the sterilization department and the surgical suite of acute-care facilities for optimal patient care.
